Davletbaeva I.M.

Chemistry, technology and properties of synthetic rubber : tutorial / I.M. Davletbaeva, D.V. Beskrovniy, O.R. Gumerova; Ministry of Education and Science of Russian Federation, Kazan National Research Technological University. – Kazan : KNRTU Publishing, 2013. – 201 p.

ISBN 978-5-7882-1416-0

The manual is intended for the 5th year students of the Polymer Faculty of 020015 "Chemical Technology" course. The manual reflects the current state of the elastomers science and production technologies. The focus is on technological methods, based on the scientific understanding of the chemistry in the synthesis of general-purpose and special rubbers, their properties and applications.

The content of the manual corresponds to the program of the course "Technology of Elastomers".

Published by the decision of the Editing and Publishing Board of Kazan National Research Technological University

Reviewers: Head of Organic Chemistry Department, KFU,
I.S. Antipin, Dr. of Chem., corr. member of RAS
Head of Materials Science and Technology
Department, KNRTU, *E.R. Galimov*, Dr. of Eng.,
professor

CONTENTS

1 INTRODUCTION	6
1.1 Elastomers Classification	6
1.2. Structural Characteristics of Elastomers and their Properties	12
1.3 Status of Synthetic Rubber Industry	22
1.4 Main Stages of Polymerization Processes	32
1.5 Methods of Polymerization	35
1.6 Heat Exchange in Polymerization	37
1.7 Rubber Separation	41
2 EXAMPLES OF TECHNOLOGICAL PROCESSES OF PRODUCTION OF SYNTHETIC RUBBER	42
2.1 Obtaining Solution Stereoregular Isoprene Rubber Using Anionic Coordination Catalysts	42
2.2 Drying of Solvent	47
2.3 Preparation of Catalyst Complex	49
2.4 Polymerization of Isoprene	51
2.5 Deactivation of Catalyst Complex	52
2.6 Degassing of Polymerizate	55
2.7 Rubber Separation, Drying and Packing	57
2.8 Secondary Operations	59
2.8.1 Preparation of Stabilizer Suspension and Stopper Solution	59
2.8.2 Preparation of Antiagglomerator	60
2.9 Obtaining Butadiene-Styrene (α - Methylstyrene) Rubbers by Free Radical Initiation of Emulsion Polymerization	61
2.9.1 Initiation of Polymerization	61
2.9.2 Reactions of Polymer Chain Growth	64
2.9.3 Chain Termination and Transfer	64
2.9.4 Components of Emulsion Polymerization	65
2.9.5 Polymerization Rate	68
2.9.6 Process of Obtaining Styrene-	68

Butadiene Rubbers	
2.10 Technology of Butyl Rubber Obtaining with Cationic Initiation in Methyl Chloride	71
2.11 Batch Preparation, Copolymerization and Rubber Separation	75
2.12 Producing Ethylene-Propylene and Stereoblock Propylene Rubbers by Gas-Phase Polymerization with Metallocene Catalysts	78
2.12.1 Chemical Structure of Elastomeric Polyolefins	78
2.12.2 Metallocene Catalysts	79
2.12.3 Obtaining Ethylene-Propylene Rubber	84
2.12.4 Producing Stereoblock Polypropylene Rubber	86
3. MAIN TYPES OF RUBBERS, PROPERTIES, PRACTICAL APPLICATION	89
3.1 Natural Rubber	89
3.2 Polyisoprene (Synthetic Natural Rubber)	96
3.3 Polybutadiene	100
3.4 Styrene-Butadiene Rubber	107
3.5 Butyl Rubber	109
3.6 Ethylene-Propylene Rubber	113
3.7 Nitrile Rubber	116
3.8 Epichlorohydrin Polymer	120
3.9 Polychloroprene	122
3.10 Polynorbornene	126
3.11 Chlorinated Polyethylene	127
3.12 Chlorosulphonated Polyethylene	128
3.13 Ethylene-Vinyl Acetate Copolymer	130
3.14 Ethylene-Acrylic Rubber	133
3.15 Polyacrylate Rubber	135
3.16 Ebonite	137
3.17 Propylene Oxide-Allyl Glycidyl Ether Copolymer	138
3.18 Fluorocarbon Rubber	139

3.19 Polysulphide Rubber	143
3.20 Silicone Rubber	145
3.21 Polyurethane Elastomers	152
3.22 Thermoplastic Elastomers - General Description	177
3.23 Thermoplastic Urethane Elastomers	181
3.24 Styrenic Block Copolymers	185
3.25 Copolyether Ester	187
3.26 Polyester Amide	190
3.27 Thermoplastic Olefin Elastomer	190
3.28 Thermoplastic Vulcanizate	192
BIBLIOGRAPHY	194
