# Contents

<b>Curriculum Vitae . . . . .</b>	<b>4</b>
<b>Editorial Note . . . . .</b>	<b>14</b>
<b>Finitely Many Mass Points on the Line under the Influence of an Exponential Potential — an Integrable System . . . . .</b>	<b>15</b>
§ 1. Analogue of the Toda Lattice for Finitely Many Mass Points . . .	15
§ 2. Flaschka's Form of the Differential Equation and Asymptotic Behavior . . . . .	17
§ 3. Partial Fractions and Continued Fractions . . . . .	21
§ 4. Solution of the Scattering Problem . . . . .	27
§ 5. Associated Differential Equations . . . . .	34
<b>Three Integrable Hamiltonian Systems Connected with Isospectral Deformations . . . . .</b>	<b>41</b>
§ 1. Introduction . . . . .	41
§ 2. Isospectral Deformations . . . . .	45
§ 3. The $n$ -Particle System on the Line with the Inverse Square Potential	47
§ 4. Asymptotic Behavior, Marchioro's Conjecture . . . . .	50
§ 5. The Periodic Case — Sutherland's Equation . . . . .	53
§ 6. Rational Character of the Solution of (2.4) . . . . .	56
§ 7. The Scattering Problem Associated with the Equation of Kac and Van Moerbeke . . . . .	60
<b>Various Aspects of Integrable Hamiltonian Systems . . . . .</b>	<b>65</b>
§ 1. Integrable Hamiltonian Systems . . . . .	65
§ 2. Examples of Integrable Systems, Isospectral Deformations . . . .	68
§ 3. Reduction of a Hamiltonian System with Symmetries . . . . .	71
§ 4. The Inverse Square Potential . . . . .	80
§ 5. Extension of the Geodesic Flow . . . . .	89
§ 6. Geodesics on an Ellipsoid . . . . .	96
§ 7. An Integrable System on the Sphere . . . . .	102
§ 8. Hill's Equation . . . . .	110

<b>Geometry of Quadrics and Spectral Theory</b>	123
§ 1. Introduction	123
a. Background	123
b. Geodesics on an Ellipsoid	124
c. Perturbations of Rank 2	127
d. Hyperelliptic Curve	129
e. Applications	129
f. Connection with M. Reid's Result [15]	130
g. Final Remarks	130
§ 2. Perturbation of Rank 2	131
a. Isospectral Manifolds	131
b. Isospectral Deformations	133
c. The Action of $Gl(2, R)$	137
d. Trace Formulae	138
§ 3. Connection with Confocal Quadrics	140
a. Integrals for the Geodesic Flow on the Ellipsoid	140
b. Isospectral Deformation	143
c. Interpretation of the Eigenvalues and the Frame of $L$	145
d. Joachimsthal's Integral	147
§ 4. The Hyperelliptic Curve	148
a. The Isospectral Manifold $\mathfrak{M}(\lambda)$	148
b. An Inverse Spectral Problem	152
c. The Symplectic Structure	156
d. Degenerate Case	159
e. Limit Cases	160
§ 5. Examples of Integrable Flows	162
a. Constrained Systems	162
b. A Mass Point on the Sphere $S^{n-1}:  x  = 1$ under the Influence of the Force $-Ax$ (C. Neumann [14])	164
c. A Mass Point on the Ellipsoid $Q_0(x) + 1 = 0$ under the Influence of the Force $-ax$ (Jacobi [6])	165
d. Geodesic Flow on the Orthogonal Group (Manakov [8], Mischenko [11])	167
e. Hill's Equation (McKean and Trubowitz [9, 10])	168
§ 6. Appendix	171

<b>Integrable Hamiltonian Systems and Spectral Theory . . . . .</b>	<b>175</b>
§ 1. Introduction . . . . .	175
§ 2. Classical Integrable Hamiltonian Systems and Isospectral Deformations . . . . .	179
1. Hamiltonian systems . . . . .	179
2. Integrals . . . . .	180
3. Perturbation of integrable systems . . . . .	183
4. The inverse square potential . . . . .	184
5. Constrained Hamiltonian systems . . . . .	186
§ 3. Geodesics on an Ellipsoid and the Mechanical System of C. Neumann . . . . .	189
1. Geodesic flow on the ellipsoid . . . . .	189
2. Confocal quadrics, construction of integrals . . . . .	191
3. Isospectral deformations . . . . .	193
4. The mechanical problem of C. Neumann . . . . .	194
5. The connection between the two systems via the Gauss mapping . . . . .	195
6. The Riemann surface . . . . .	199
§ 4. The Schrödinger Equation for Almost Periodic Potentials . . . . .	202
1. The spectral problem . . . . .	202
2. The periodic case . . . . .	203
3. Almost periodic potential . . . . .	206
4. The rotation number . . . . .	207
5. The Green's function and a trace formula . . . . .	208
6. Connection with the KdV equation . . . . .	211
§ 5. Finite Band Potentials . . . . .	214
1. Formulation of the problem . . . . .	214
2. Representation of $G(x, x; \lambda)$ in terms of partial fractions . . . . .	215
3. Connection with the mechanical problem . . . . .	217
4. Solution of the inverse problem . . . . .	219
5. Finite gap potentials as almost periodic functions . . . . .	221
6. The elliptic coordinates on the sphere . . . . .	223
7. Alternative choice of the branch points . . . . .	224
§ 6. Limit Cases, Bargmann Potentials . . . . .	225
1. Schwarz–Christoffel mapping . . . . .	225
2. Basis for the frequency module . . . . .	226
3. Stationary solutions and their stability behavior . . . . .	228
4. The flow on the unstable manifold $W_+(e_n)$ . . . . .	229

5.	The Bargmann potentials . . . . .	231
6.	A focussing property on $S^2$ . . . . .	234
7.	$N$ -solitons . . . . .	236
8.	Concluding remarks . . . . .	237

## Discrete Versions of Some Classical Integrable Systems and Factorization

<b>of Matrix Polynomials</b> . . . . .	241
§ 0. Introduction . . . . .	241
§ 1. The Discrete Version of the Dynamics of a Rigid Body . . . . .	246
1.1. The Equations of «Motion» . . . . .	246
1.2. The Solution of the Matrix Eq. (6): $\omega^T J - J\omega = M$ . . . . .	249
1.3. Isospectral Deformations . . . . .	252
1.4. The Symplectic Geometry of Eq. (6) . . . . .	254
1.5. The Integration of the Discrete Euler Equation . . . . .	258
1.6. Explicit Formulas for the Discrete Dynamics of the 3-Dimensional Rigid Body . . . . .	261
§ 2. The Discrete Dynamics on Stiefel Manifolds and the Heisenberg Chain with Classical Spins . . . . .	264
2.1. The Equation of the Dynamics and Isospectral Deformations . . . . .	265
2.2. Discrete Version of the Neumann System and the Heisenberg Chain With Classical Spins . . . . .	266
§ 3. The Billiard Inside an Ellipsoid . . . . .	269
3.1. The Splittings and Isospectral Deformations . . . . .	270
3.2. Connection Between the Ellipsoidal Billiard and the Discrete Neumann System . . . . .	272
