# CONTENTS & ABSTRACTS

## MODELS AND MECHANISMS FOR ECOLOGICAL-ECONOMIC SYSTEMS MANAGEMENT . . . . . 2

**Burkov V.N., Novikov D.A., and Shchepkin A.V.**

The basic model of ecological-economic system (EcES) is introduced, and its generalizations are analyzed. The brief survey of EcES management models and mechanisms is given.

**Keywords:** ecological-economic system, game theory, mechanisms of decision-making.

## $H_\infty$ -POWER SYSTEM EMERGENCY MANAGEMENT. Part I: Theoretical basis of robust $H_\infty$ -regulators synthesis 8

**Kurdakov A.P. and Timin V.N.**

The paper addresses the problem of external disturbance attenuation in a power system. The problem solution is based on the technique of closed-loop pole placement in a given region of complex plain, as well as loop shaping using linear matrix inequalities.

**Keywords:** power system control,  $H_\infty$  control theory, linear matrix inequalities, disturbance attenuation, loop shaping, closed-loop pole placement in a given region.

## IDENTIFICATION ALGORITHM WITH TRANSITION IN THE PARAMETERS DOMAIN . . . . . 18

**Gusev S.S. and Chadeev V.M.**

The identification algorithm of static object with restrictions is considered. The case when the error of output measurement of object  $y$  leads to exceeding the bounds of area of admissible estimations of parameters  $H$  with some probability  $p$  for all  $n$ -dimensional blocks and the case of greater errors when the probability is strictly equal to zero are offered. The connection of error of measurement and probable distribution of parameters estimation error is analysed with use of Kramer formula.

**Keywords:** identification, restrictions, static object, parameter estimations, error of output measurement.

## ADAPTIVE GUARANTEED ESTIMATION USING THE INFORMATION ON THE SET OF "RELATIVE OBJECTS" . . . . . 22

**Afanaseva K.E. and Shiryaev V.I.**

The paper gives the estimation algorithms of object's state on the basis of data on "relative" objects under disturbances and not precise and full measurements of ob-

ject's vector. The information on disturbances and measurement errors is known only to some defined sets. If the trajectory of object is changed, the information on "relative" objects is used to define the model for the object considered.

**Keywords:** adaptive guaranteed estimation, information set, "relative" objects, discrepancy.

## USING RELATIONS OF ATTRIBUTES FOR BUILDING ONTOLOGY OF SUBJECT DOMAIN . . . . . 27

**Pronina V.A. and Shipilina L.B.**

The method for building of ontology for a subject domain is offered. It allows automating building taxonomy of concepts with use of expert knowledge on attributes of subject domain. The method is based on the binary relations of "xistence constraints" on set a of attributes and Formal Conceptual Analysis. The example of taxonomy fragment for graph theory, built with the use of offered method is made.

**Keywords:** ontology, taxonomy, formal concept analysis, relation of existence constraints, graph theory.

## PRINCIPLES OF DESIGN AND DEVELOPMENT OF INFORMATION SYSTEM FOR FINDING OPTIMAL PATH IN PUBLIC TRANSPORT . . . . . 33

**Vishnevsky V.M., Zhelezov R.V.**

The architecture of developed information system for finding optimal path in public transport is proposed. The original algorithm for finding optimal paths taking into consideration public transport timetables is produced.

**Keywords:** information system, optimal path, public transport, timetable, Internet.

## EXPERT-CLASSIFICATION METHODS FOR DESIGNING PROFESSIONAL AND EDUCATIONAL STANDARDS . . . . . 38

**Nikitin V.V.**

To improve the ontology of professional activity objects in order to develop professional and educational standards, the expert-classification procedure is proposed. It essentially uses automatic classification algorithms.

**Keywords:** domain ontology, objects of professional activity, expert-classification algorithms.

ONE APPROACH TO ALLOWING FOR HIERARCHICAL STRUCTURE OF OPTIMALITY CRITERIA OF MULTISERVICE COMMUNICATION NETWORK . . . . .	44
<b>Gilyazov R.L. and Stolbov V.Yu.</b>	

The paper considers the problems of selecting the optimal multiservice communication network configuration. The original method of allowing for hierarchical structure of fuzzy conflicting interests of various groups of users is suggested. Some demonstration examples are made.

**Keywords:** multiservice communication networks, optimization, social groups of users, hierarchical structure of fuzzy preferences.

SYSTEM MANAGEMENT OF INFORMATION RISKS: CHOICE OF MECHANISMS FOR PROTECTION AGAINST INFORMATION RISKS . . . . .	53
---	----

**Zavgorodniy V.I.**

The paper considers management of information risks at a level of enterprise's entire information sphere and is not limited to frameworks of information safety. The method for optimization of choice of mechanisms of protection against information risks is offered.

**Keywords:** information risks, system management of information risks, information risk control system, choice of mechanisms for protection against information risks.

USE OF LEARNING SAMPLE TO DEFINE A PRIORITY OF CRITERIA IN SCIENTIFIC JOURNALS RATING SYSTEM . . . . .	59
--	----

**Fedorets O.V.**

Mathematical model for automated rating of scientific journals for decision support in acquisition of scientific journals in the information centre is presented. The statistical technique of weighing based on the use of learning sample and reference criterion is developed for selection of the most significant criteria and determination of their priorities in condition of data incompleteness. To compute scientific journals rating the analytic hierarchy process is used.

**Keywords:** rating of scientific journal, decision making, priority of criteria, statistical procedure, learning sample, analytic hierarchy process, database, SQL.

IMPROVEMENT OF POWER CHARACTERISTICS OF LIQUID-PROPELLANT ROCKETS BY MEANS OF AUTOMATIC CONTROL.	
--	--

Part I: Physicotechnical bases of fuel consumption control . . . . . 66

**Andrienko A.Ya. and Ivanov V.P.**

The basic results of semicentennial development of family of control systems of liquid fuel consumption for domestic carrier rockets and intercontinental ballistic missiles are stated. Physicotechnical bases of construction of these systems are explained.

**Keywords:** liquid rocket engines, power characteristics, guarantee fuel capacity, management of fuel consumption.

SYSTEM OF INFORMING AND WARNING OF POPULATION: PROOF OF REASONABLE FUNCTION CAPACITY . . . . .	72
--	----

**Durnev R.A.**

The paper considers main functions of the system of informing and warning of the population for safety purposes. Problem statement and results of computation of reasonable function capacity in different modes are provided.

**Keywords:** informing and warning of population, information-telecommunication technologies, information centre, terminal complex, systems functions.

SOCIAL AND ETHIC ASPECTS OF INFORMATION SECURITY ENSURING . . . . .	76
---	----

**Kononov O.A. and Kononova O.V.**

Problems of the present-day society information security ensuring through making principles of information ethics clear to the participants of the information relations are studied in the paper.

**Keywords:** information technologies, information security, information relations, computer ethics code, information ethics.

22nd EUROPEAN CONFERENCE ON MODELLING AND SIMULATION — ECMS 2008 . . . . .	80
