**1.4 Read the article and answer the multiple-choice questions.**

Genealogy, or researching your family tree, is a hobby that can rapidly develop into an obsession. Before you start looking for your own ancestors, read this advice from genealogist Maria McLeod.

The first question to ask yourself is why you want to research your family tree. Genealogy is not about discovering that you are the heir to the throne of an unknown country. It's about finding out more about yourself. For most people the important question is 'why am I like I am?'. You might not look like other members of your immediate family and you want to know where your green eyes or curly hair come from. You may be curious about why you have such a quick temper or are utterly hopeless at mathematics. You may even be suffering from a medical condition and want to know if something in your genetic makeup has caused it.

Another common motive for researching your family tree is that you plan to visit the place that your ancestors come from and you secretly hope that you will find some long lost cousins with whom you can share your memories. There can be few more exciting things than meeting a distant cousin who is living on the other side of
