WITH SINCERE RESPECT AND ESTEEM,  
BY

THE AUTHOR.

## P R E F A C E.

THE present volume contains twelve Lectures, delivered in 1874 and 1875; and these form part of a series of discourses on Dermatology which were commenced in 1870, and have now reached thirty-six in number. The former Lectures have already been published in two volumes, in 1871 and 1873.

The plan of these Lectures is to treat consecutively of the whole of the diseases of the skin, in the most convenient order, beginning with diseases of inflammation, common and specific; then taking diseases due to aberration of nutrition and sensation, and proceeding onwards to disorders of pigmentation, diseases of the epidermis and nails, of the cutaneous glandular system, and of the hair.

The first volume, containing six Lectures, was framed as a synopsis of the whole subject. The second volume, consisting of eighteen Lectures, comprehends the diseases of inflammation, common and specific, and the first of the members of the nutritive group.

The diseases of common inflammation being—

Eczema, with its allies, lichen, impetigo, and scabies;

Erythema, with erysipelas and urticaria;

Pemphigus, with miliaria and herpes;

Furunculus, with ecthyma and anthrax; and

Traumatic affections, resulting from the operation of chemical and mechanical irritants and the bites of animals.

The diseases of specific inflammation being—

Exanthemata;

Syphilis; and

Elephantiasis.
