

Perm State Pharmaceutical Academy, Perm, Russia

Annotation. The purpose of student scientific society is to improve the quality of specialist. Work of students in student scientific society of the Department for inorganic chemistry lies mostly in the study of the biological role of elements and their compounds. The work of the student scientific society of the Department of inorganic chemistry can be divided into several stages: the choice of the topic of the essay; collection of material using literary sources and information resources; writing of abstracts and design of presentations according to plan agreed with the teacher; preparation of demonstration experiments; scientific student conference. A big role in stimulating students to work in the student's scientific society has a rating system that is now actively being developed in the Universities.
